

Portable Test Equipment

**TS220™
and TS250™
ISDN Test Sets**

*intuitive,
full-featured
ISDN testing*

With intuitive, common sense menus and a comprehensive set of features, our TS220 and TS250 test sets virtually eliminate the need to learn complex ISDN protocols. We designed them to empower conventional line technicians to handle any ISDN aspect, from prequalifying a line as ISDN-capable through post-installation troubleshooting.

Both models test the two-wire U Interface, while the TS250 permits additional inspection of the four-wire S/T Interface inside the customer premises. All functions, including BERT and placing a voice call, are readily accessible with just a few keystrokes. If you need to get clarifying information for any menu or ISDN message, simply press Assist for plain-language help.

Part Numbers:

TS220 Basic Rate ISDN Test Set.....P/N 25470-XXX
TS250 Basic Rate ISDN Test Set.....P/N 25475-XXX
*Last 3 digits vary depending on feature differentiation such as line cord.

Features:

- Automated call-yourself BERT
- U and S/T Interface testing
- Supports line prequalification
- 64K and 56K data and voice calls
- On-line Assist key explaining complex messages in plain English
- Amplified speaker
- Backlit Liquid Crystal Display (LCD) and backlit keypad
- Impact-resistant and water-resistant
- Operates on 4 AA alkaline or rechargeable NiCad batteries
